The world as 100 people over the last two centuries

gpt-5 (P3; wrong in both orders): "[The judge's pick] clearly labels axes, units, and metrics with readable scales and context, ... while [the winner] is aesthetically nice but ambiguous and lacks labels or clear meaning."

As Johnny Depp got older / more successful, his GF's got younger

gpt-5 (P3; wrong in both orders): "[The judge's pick] uses consistent labeling, colors, and scales to clearly show monthly totals and category breakdowns, whereas [the winner] has cluttered slanted labels, unclear axis meaning, and weaker design aesthetics."

Evictions and Race in Kansas City, MO.

gpt-5 (P3; wrong in both orders): "[The judge's pick] clearly communicates data with labeled choropleths and legends, while [the winner] is an abstract line rendering that looks artistic but is hard to interpret or quantify."
